

Executive Summary

Today's Internet hosting environment has left customers in a state of anxiety and uncertainty. Datacenters are closing at an alarming rate, professional services departments are being significantly reduced or eliminated and many collocation companies are going bankrupt.

Migrations are inevitable. Improperly planned and poorly performed migrations of web sites and servers can have a profound impact on business operations. This can result in significant lost revenue, extended disruption of service and additional expense.

DataMove is focused exclusively on Corporate and Data Center Migrations. Unlike value-added resellers and consulting firms, we provide companies a comprehensive scope of migrations services and expertise to mitigate many of the unexpected problems that occur during migrations. We are a single source provider for all migration needs.

Our vast and unique migration experience combined with our dedication allows us to deliver to our customers a cost effective, seamless migration mitigating many of the inherent and unforeseen problems that can occur.

Our Team

DataMove's team of engineers and project managers has the depth of experience and technical expertise to deliver results.

DataMove saves you time AND money

Migrations can be a significant capital expenditure. Cost overruns are eliminated with proper planning, proven procedures and an experienced team. Unlike our competitors you won't waste time or money waiting for DataMove to create a migration plan. Learning on the job how to interface with your existing IDC at your company's expense could result in disastrous outcomes and significant losses in revenue.

Independence

DataMove is hardware and data center vendor independent. We make recommendations and implement solutions based only on your requirements. This results in better, more cost effective migrations.

We expand your IT department's capabilities

We work strategically with your IT departments and vendors to ensure maximum delivery and capabilities to help you or your customers meet their business objectives.

- Pre-Move Analysis
- Cost Analysis
- Full Service Project Management
- Swing Equipment

For Information

To inquire about the seamless and secure transition of your data infrastructure, please call one of our consultants. We welcome your inquiries and would be happy to discuss a plan that ensures a safe migration of your web-based business.
